FRONT & BACKEND TECHNICAL EXPERIENCE

LoHi - 14 day Full Stack group sprint - project in Demo Competition   Deploy Link | GitHub Repo

LoHi is a full stack application that allows users to see the recipes adjusted to the altitude of their desired location.

- Used agile methodologies including daily standups and sprints to effectively facilitate collaboration
- Collaborated with one other front-end developer to create a robust user experience including multiple custom components, end-to-end testing with Cypress and the creation of a PWA from scratch.
- Individually contributed the wireframe, design, and vast majority of CSS
- Project was selected as the top project in the cohort to participate in Turing School's Demo Competition

Tech*: React | Router | Hooks | CSS3 | Cypress | PWA | Ruby on Rails | PostgreSQL | Surge*

Marvel2U - 4 day solo sprint   Deploy Link | GitHub Repo

Marvel2U is a React App that allows users to search Marvel Characters and see their details within a click on the display card

- Used GitHub Project Board utilizing Kaban management method
- Successfully built the app with hooks and used a public api.
- Challenged myself on CSS and JSX by using the real marvel website as an inspiration.

Tech*: React | Router | Hooks | CSS3 | Cypress | Marvel API |GSAP | Node*

Tomates Podres - Group Project   Deploy Link| GitHub Repo

Movie react app that lets users search, watch trailers, and read about movies.

- Collaborated with one other front-end developer to create our first React app including custom components with custom hooks , end-to-end testing with Cypress, and a multi-page layout with the help of Router
- Individually contributed the design, all the CSS and JSX, successfully built the rating starts component using hooks for the first time.

Tech*: React |Router| Hooks | CSS | Cypress |Node*
