- Ruby on Rails
- Postgres
- ActiveRecord

- CSS/HTML
- TDD
- RSpec

- Git
- Agile practices
- Restful APIs

- GitHub
- Heroku
- JavaScript

SOFTWARE PROJECTS

HelpList, Group Project | Github Repos | Heroku
Tech Stack: Ruby v3.1.1 and Rails 7.0.4.3, RSpec 3.12 versions, PostgreSQL
HelpList allows victims of domestic violence in collaboration with an organization, to create personalized wishlist's of needed items to post anonymously. Users can select a facility, select a wishlist, and purchase items from wishlists to be sent directly to the organization and survivors.

- Used Rails to create both front and back-ends that allow users to CRUD resources
- Utilized workflow tools to outline code architecture and functionality at a high level through Test-driven-development and Object Oriented programming.
- Designed and implementing RESTful JSON APIs

Road Trip Planner API, Solo Project | Github Repo
Tech Stack: Ruby v3.1.1 and Rails 7.0.4.3, RSpec 3.12 versions, PostgreSQL
The API is built using a service-oriented architecture, and it requires authentication token for accessing certain endpoints. It also provides CRUD functionality for managing user accounts and road trip destinations.

- Exposed an API that aggregates data from multiple external APIs
- Exposed an API that requires an authentication token
- Exposed an API for CRUD functionality
