PROFESSIONAL PROFILE

Front-End Developer with over 6 years of service management experience.

Projects

– Dungeons & Documents

-Dungeons & Dragons character creator with a monster manual fetched from an api. Users can randomize a character, create a party, and search for monsters.
- Developed with a remote team of developers utilizing best practices and git workflow
- Tech stack: React, React-Router, Typescript, CSS
- This is my first project with Typescript. I contributed to all of the character page react components as well as implemented a lot of the css. I created several custom assets with Figma.

– Rancid Tomatillos

-A movie database application where users can navigate through a selection of movies fetched from an API. Users can search for movies or select one by clicking. clicking on a movie will expand and gather more data to display about the movie. Hovering on a tile also displays some info.
- Developed with another developer, async workflow and good git practices.
- Tech stack: React, React Router, SASS
- Outside of a short daily stand up we communicated mostly through pull requests and project board updates.
- It was my first time utilizing sass and also our first time using react router.

– Pantry to Pan

-A recipe website application that gathers recipes from an api call. Users can search and filter through recipes, as well as save them to view later.
- Developed with a team of remote developers utilizing git workflow
- Tech stack: JavaScript, CSS, Webpack
- We developed this app with Test Driven Development mostly async
- I contributed the class architecture, as well as the filter and search functions.

Experience

Shift Manager
Starbucks/Denver / Oct 2018 - May 2022
Oversaw operations at a downtown location that experienced heavy traffic. Was responsible for inventory, employee training, and situation de-escalation. During my time there we saw our customer satisfaction score increase despite covid.
