SOFTWARE PROJECTS

Bootleg Barkeep, Group Project | 40 hours | [Repo Hyperlinked](#) | [Deployed Link](#)

Tech Stack: TypeScript, JavaScript, React, React Router, Cypress end-to-end testing framework

Developed a web application that allows you to search for cocktails by alcohol type then display ingredients and instructions of a particular drink once selected.

- Self-taught then implemented TypeScript in a group project over a 10 day period
- Worked on a team with 3 other students where we learned to effectively utilize GitHub project boards, daily stand-up meetings, and Slack to work mostly asynchronously
- Utilized React, React Router, and Cypress to build a single page application with thorough end-to-end testing

BeerMe, Solo Project | 40 hours | [Repo Hyperlinked](#) | [Deployed Link](#)

Tech Stack: JS, HTML, CSS, GitHub

Developed a web application that allows you to select a state then view the breweries in that state.

- Worked independently to find an API with usable data, conceptualize an idea, create a plan, and design a website.
- Created a site in 6 days with React and React Router

What's Cookin?, Group Project | 30 Hours | [Repo Hyperlinked](#) | [Deployed Link](#)

Tech Stack: JS, HTML, CSS, GitHub, Fetch

Developed a web application that displays recipe cards and provides ingredient lists and directions.

- Worked effectively and efficiently with 3 other students
- Connected application to an API
- Utilized JavaScript to write tests for classes and methods, display information on each recipe card, and to provide functionality for card to flip over
